

1 **ABSTRACT**

2 A system receives a broadcast data stream that is encoded using any
3 encoding format. The received broadcast data stream is demultiplexed and stored
4 on a storage device. In response to a command to play back the stored broadcast
5 data stream, the stored data stream is retrieved and rendered in a manner that
6 corresponds to the play back command. Multiple systems may retrieve the stored
7 broadcast data stream simultaneously.
